

Network Management Automation

Sooth automates costly, routine network management tasks. Our products slash operating costs, optimize performance and enhance security while consistently enforcing best practices.

Saves 35-50% Network Management Costs

Prevents More Than 90% of Root Causes of Security Incidents and Outages

Simplifies Regulatory Compliance

Installs and Configures Safely and Easily

It's like having network technicians in a box!

SEER™ *automated network device inventory*

An automated solution to a difficult, yet necessary task—collecting and maintaining detailed inventory information for every Cisco IOS device on the network. SEER collects and reports:

- Cisco Model # and all Serial #s
- Cisco IOS Software Version
- Devices aware of or passing traffic to other network devices
- Component inventory
- Structural “blueprint” of the network (key for disaster recovery)

- Full “run-state” for each device
- Memory (both DRAM and flash)
- Addressing and Routing tables
- ARP, MAC, Bridge, Root Bridge, VLAN and IP by switch port

SEER eliminates errors in information gathering and effort for mandatory security and compliance activities. Scanning and refreshing this information daily drastically reduces down-time and speeds parts replacement and repair times when devices fail.

SUPERVISOR™ *automated network management*

SUPERVISOR automates tier 1 and tier 2 network management, eliminating most requirements for IT staff intervention to keep networks operating optimally and securely. The common chaotic, high cost and inefficiency of network management and security becomes a thing of the past. SUPERVISOR:

- Locks out rogue devices and unauthorized access attempts
- Enforces usage rules
- Enforces change management procedures
- Prevents unauthorized configuration changes
- Repairs simple network failures
- Can be “trained” with customer specific responses

- Stores detailed configurations and settings per device for disaster recovery
- Provides full running configuration information

Operating Savings: achieves network management savings of 35-50%.

Ultimate Security: prevents more than 90% of root causes of security incidents and 100% of unauthorized access to Cisco devices—no second attempts are allowed.

Reduced Downtime: prevents more than 90% of root causes for outages by enforcing change controls and best practices.

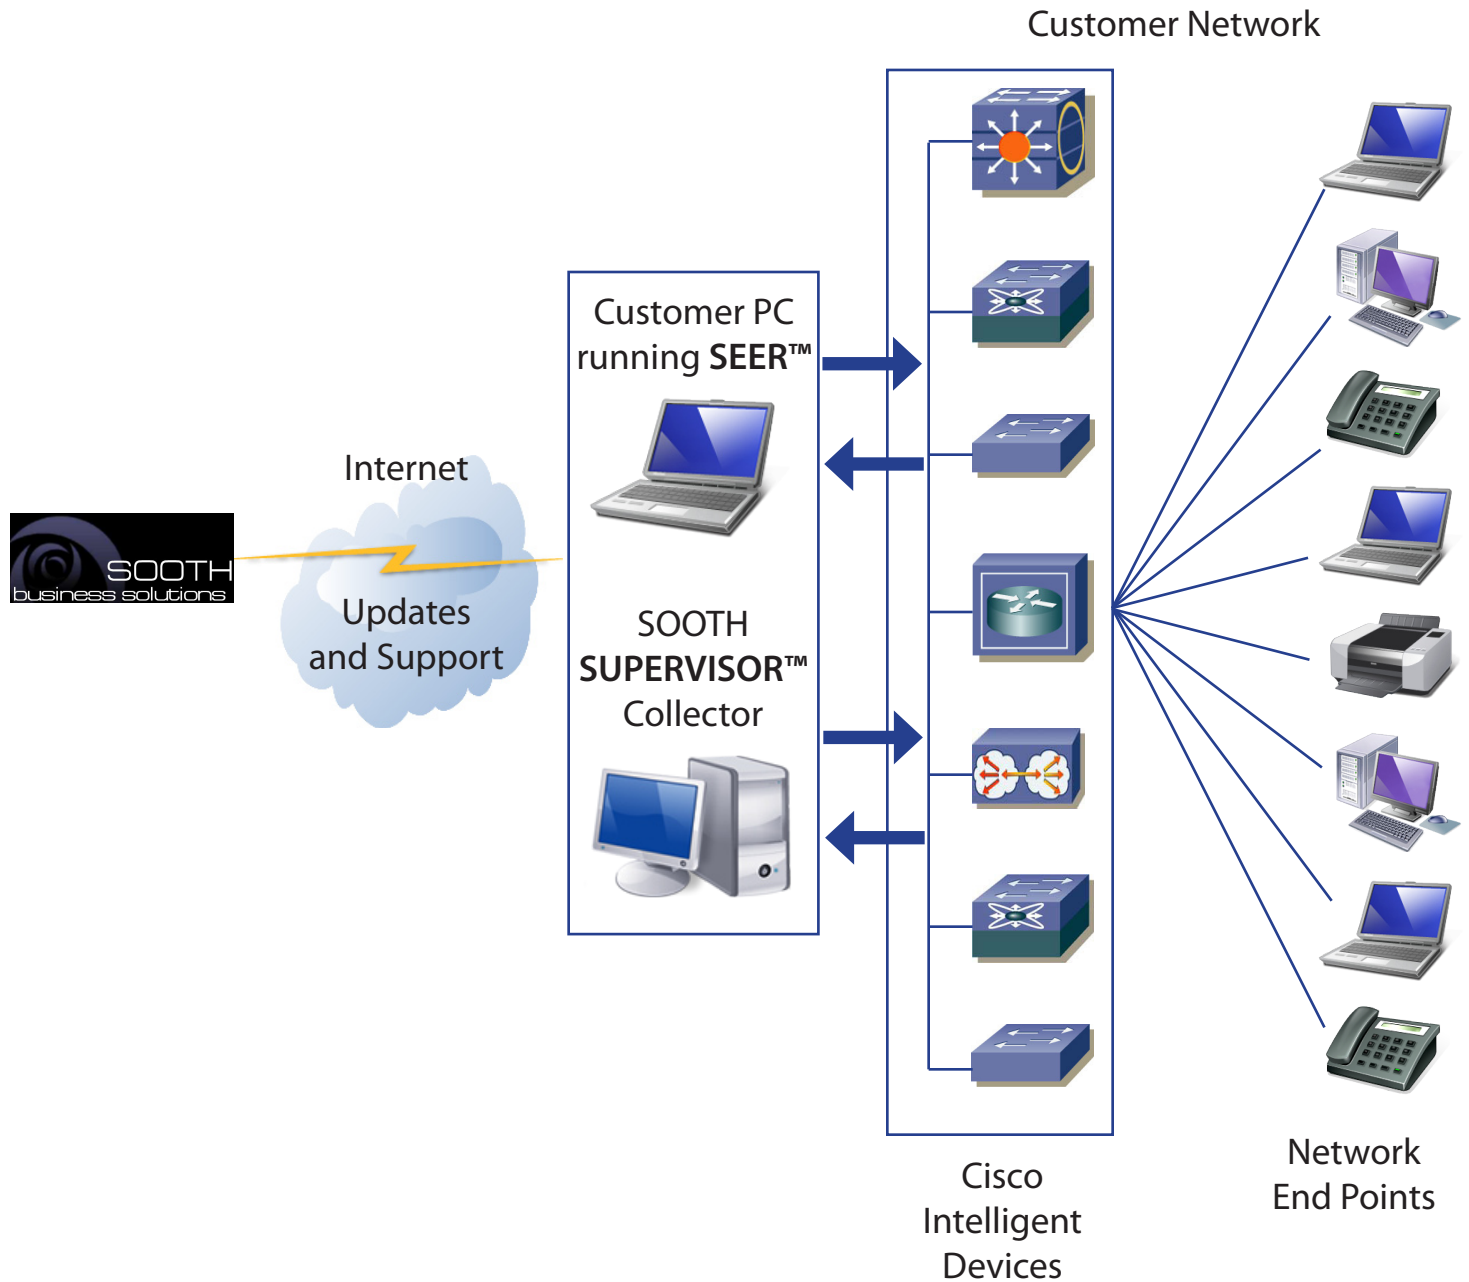

Improved Efficiency: necessary operations are done at machine speed without intervention.

“Unless smoke is coming out of a managed device, no IT staff involvement is necessary”
